** A delivery charge of the entire order to the SPAWN site will be divided between all participants. Individuals must pick up their tanks at a single site in Marin.

ABOUT THE TANKS

American Tank Company's freshwater polyethylene (poly) storage tanks are manufactured by means of the rotational molding process, which produces a one-piece, seamless tank. Linear poly tanks are molded from 100% FDA approved materials and will not impart any taste or residue, meeting the National Sanitation Foundation (NSF) requirements for safe storage of drinking water (potable water).

American Tank Company's freshwater tanks are UV stabilized and will not breakdown under harsh outdoor weather conditions, and will not rust, chip, peel, or corrode. Green opaque color helps prevent water borne algae growth.

American Tank Company's freshwater tanks can be placed on any flat, firm, level surface for simple installation, and being lightweight, easily rolled into place by hand. Great for remote cabins and hard to reach locations! Pre-installed fittings include 1½" top-inlet & 2" lower-outlet for simple hookup, and the standard 16" threaded manway with a 2" vent allows for easy access to the tank. Extra fittings can be easily added and allow for the installation of additional accessories and system components.

American Tank Company supports the manufacturer's 3-year warranty on freshwater tanks which are designed and warranted for water use only, at ambient temperature and are not intended nor warranted for chemical storage.

Turtle Island Restoration Network works to mobilize people and communities around the world to protect marine wildlife, the oceans and the inland waterways that sustain them.

The **Salmon Protection And Watershed Network (SPAWN)** is a project of Turtle Island that works to protect endangered salmon and their habitat in the Lagunitas Watershed.
